

## Load balancing

*Static*

*Dynamic*

*Work-stealing*

**TPB**

thread-pool,  
static round-robin

**PC**

producer-consumer  
queue

**FJ**

fork-join  
work-stealing

**PLM**

partition +  
local merge

—

—

SEQ — single-thread baseline (1 thread, one collector)

Threshold sharing

**Shared**  
(global  $\tau$ )

**Local**  
(per-thread  $\tau$ )
